

Physics of God's Creation Andrey Goryainov

We never expect the books we help publish to be just read. We know that their content is capable of powerfully changing individuals and whole cultures. This month's Book Club selection is a great example of that.

Physics of God's Creation began as part of a big proposal field partner Sergei Golovin made in 2014 to fill a gap for Christian teachers and parents: publish 15 science textbooks with a Christian worldview in Russian. All 15, including *Physics of God's Creation*, were completed in Russian, and several have been published in Ukrainian, too.

Sergei underlines that this is the first Christian science textbook written originally in a national language of the former Soviet Union. He says, *This took seven years of work. As each chapter was written, it was published in 100-page booklets and sent to teachers (including secular), parents, and ministers for proofing and review.*

The Russian editions have worked well in Ukraine, and several other countries, but a new law requires schools to provide basic curriculum in Ukrainian. Sergei says, *Having the book in Ukrainian will allow us to place it in the public school libraries. That will make a great impact on shaping the next generation.*

Your Book Club contribution in October will help fund 1000 copies of *Physics of God's Creation* in Ukrainian.
